M. PHIL. PROGRAM OUTCOMES

PO. NO.	UPON COMPLETION OF THIS PROGRAM THE STUDENTS WILL BE ABLE TO
1.	Reflect critically on their own, with their peers' and synthetic working situations in the light of new concepts and course input.
2.	Identify relevant sources, evaluate them and to use these appropriately in their studies.
3.	Engage in independent study and group/pair work including the presentation of materials.
4.	Relate skills with self management and task achievement, meeting deadlines, problem-solving and meta cognitive awareness.
5.	Associate study skill with data collection and researching, digesting, selecting, planning, writing and presenting articles for publication.
6.	Present reports on their findings in the respective category of work to improve their expertise and imbibe practical abilities.

M. PHIL. PROGRAMME SPECIFIC OUTCOMES

PSO. NO.	UPON COMPLETION OF THIS PROGRAM THE STUDENTS WILL BE ABLE TO	PO MAPPED
PSO - 1	Apply recent methodologies and techniques in research	PO - 5
PSO - 2	Provide novel solutions to complex problems.	PO - 2

UNIT I

An introduction-Meaning of research-Objectives of research- Motivation in research-Types of research - Research methods versus methodology-Research and Scientific method-Criteria of good research- Defining the research problem - Selecting the problem - Necessity of defining the problem- Techniques involved in defining a problem - Research design-Meaning of research design- Need for research design- Features of a good design- Important concepts relating to research design - Report of thesis. **(30 Hours)**

UNIT II

Sampling design -Element selection - Census and sample survey -Implication of sample design - Steps in sample design -Criteria of selecting a sample procedure -Characteristics of a good sample design- Types of sample design -Selection of random sample -Conclusion. Methods of data collection - Collection of primary data - Collection of data through questionnaires - Collection of data through schedules - Difference between questionnaires and schedules - Other methods of data collection - Collection of secondary data - Selection of appropriate method for data collection - Case study method - Conclusion. **(30 Hours)**

UNIT III

Proof methods and induction - Formal proofs - Proofs and the real world - Propositional reasoning examples - Proofs by contradiction - Proofs: False proofs - Inductive proofs - More simple induction -Tiling problem - Geometry - Double induction - Strong induction - Tournaments - Induction, strong induction and well ordering - Structural induction - Induction and recursive algorithms.

(30 Hours)

UNIT IV

Mathematical modelling through difference equations - The need for Mathematical modelling through difference equations: some simple models -Basic theory of linear difference equations with constant coefficients -Mathematical modelling through difference equations in Population Dynamics and Genetics - Mathematical modelling through difference equations in Probability theory.

(30 Hours)

UNIT V:

Mathematical modelling through graphs -Situations that can be modelled through graphs - Mathematical models in terms of directed graphs - Mathematical models in terms of signed graphs - Mathematical modelling in terms of weighted digraphs - Mathematical modelling in terms of unoriented graphs. **(30 Hours)**
